    - Chewing gum contains ginkgo extract as essential component. Pref.
AΒ
      ginkgo extract contains either one or both of terpenes, e.g.
      ginkolide, biolalide, flavonoids, e.g. quercetins, kaempherols.
    - USE/ADVANTAGE :
      Chewing gum contains flavonoids of terpenes (bitter components), and
       is used for prophylaxis or treatment of cerebral haemorrhage or senile
      dementia. By adding ginkgo extract, faintly bitter taste and
       deodorising effect are caused.
